Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## In the beginning...

- 13 years ago tomorrow Ian Murdock announced Debian
- From 1 developer to  $> 1,000$
- Toy Story releases; from “buzz” to “sarge”
- “etch” next

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

# Why should I use Debian?

- Stable
- Production tested
- Social Contract
- Policy
- Maintainers
- Packaging

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## A social contract<sup>1</sup> with our users

- 100% Free
- Give back to the Free Software Community
- We won't hide problems
- Our users and Free Software are our priorities
- (Limited) support for non-free software

---

<sup>1</sup>/usr/share/doc/debian/social-contract.txt

Introduction

Why?

How?

What's next?

## How packages must behave<sup>2</sup>

- A codification of requirements for packages
- Must and should directives
- Documents practice
- Packages that violate a “must” directive are buggy and will not be included in a release

debian

Debian: Why?

Don  
Armstrong

Introduction

Why?

How?

What's next?

# Debian Packages

- Packages installed by dpkg
- Responsible for doing the right thing to packages
  - Handling files in packages
  - Running scripts attached to the packages
  - Handling conflicts/assuring dependencies are resolved
- An ar archive with three parts, two of which are tarballs<sup>3</sup>

---

<sup>3</sup>deb(5)

# Organization Overview

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## How does Debian actually do it?

- Lots and lots and lots of Magick
- Policy
- Automated tools
- shlibdebs
- BTS
- lintian
- pbuilder
- Suites (stable, testing, unstable, experimental, oldstable)

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## Our package's journey begins

- Someone decides they want to package it (Class::Modular)
- Files an ITP (more on this later)
- Creates a Debian package (`dh-make-perl --cpan Class::Modular`)
- Builds the package (pbuilder)
- Tests the package (lintian, piuparts)
- Signs the changes and .dsc file
- Uploads the package to the archive (or a sponsor does it)

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## Creating the package

- `dh-make-perl` (we'll cheat) or `dh_make`
  - Creates the `debian` directory with `rules`, `control`, `changelog`, ...
- New Maintainer Guide, policy and existing documentation for less trivial packages

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## Building the package (with pbuilder)

- Automatically downloads package build dependencies in a chroot
- Builds the package in a chroot
- cleans up the chroot when done (deletes it)
- Has neat hook scripts and other stuff
- dpkg-shlibdeps

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## Testing the package

- Actually use the package
- piuparts
- lintian
- linda

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## People can see our package in unstable

- Package is accepted by ftpmaster (NEW processing)<sup>4</sup>
- Mirror pulse; people apt-get update; and apt-get install libclass-modular-perl;
- People running unstable now can use our package
- People report bugs

---

<sup>4</sup><http://ftp-master.debian.org/>

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## Reporting Bugs in Debian

- Bugs are reported to a publicly viewable bug tracking system ([bugs.debian.org](http://bugs.debian.org))
- reportbug or your MUA can be used to easily report bugs
- submitted bugs are assigned to a package
- Maintainer notified and communicates with submitter
- Bugs fixed

Angst Technology

by Barry T. Smith

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## Our package moves on to testing

- After 10 (low), 5 (medium) or 2 (high) days, our package is eligible to move to testing
- The package migrates IFF
  - ① Can be installed in testing
  - ② Has fewer RC bugs<sup>5</sup> than testing version
- More people use our package, file more bugs, more bugs are fixed
- Uploads to unstable continue on while this is occurring

---

<sup>5</sup>Severity  $\geq$  serious

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## A major debian server burns, and Debian releases

- If our package is in testing (we were good maintainers) it gets promoted to stable when testing is promoted.
- Stable and testing are actually symlinks
- Currently stable points at sarge, and testing points at etch
- Releasing just means `mv stable oldstable`; `mv testing stable`; and creation of a new testing codename.

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## The stable story: Security

- Security bugs – security-team and DSA
- Serious bugs – stable-proposed-updates
- Stable Updates (3.1r2)
- End of life: oldstable and [archive.debian.org](http://archive.debian.org)

debian

Debian: Why?  
How?

Don  
Armstrong

Introduction

Why?

How?

What's next?

## What's next for etch?

- Graphical Installer (d-i!)
- Single Kernel
- Faster (?!) release cycle
- New packages
- Modular xorg
- udev everywhere

debian
